STUDENT ASSISTANT CHATBOT

Submitted by: Shailly Vishwakarma

INTRODUCTION

This project is a Student Assistant Chatbot developed using the WotNot platform. The chatbot is designed to help BSc and BTech students by providing answers to academic doubts, career guidance, and useful insights. The chatbot is integrated into a website and deployed using GitHub Pages for easy access.

OBJECTIVES

- To develop an interactive chatbot for students
- To provide solutions for academic doubts
- To offer career guidance and insights
- To deploy the chatbot on a public website .

TOOLS & TECHNOLOGIES USED

- WotNot Bot Builder
- HTML (for webpage creation)
- GitHub Pages (for hosting website)
- Web browser for testing

FEATURES OF THE CHATBOT

- Doubt solving section (study & technical questions)
- Career guidance section
- Insights section (skills, trends, productivity)
- Interactive buttons and user input
- Easy navigation with menu options

WORKING OF THE CHATBOT

The chatbot starts with a welcome message and displays multiple options such as Doubts, Career Guidance, and Insights. Based on the user's selection, the chatbot provides relevant responses. The chatbot is designed using a flow-based approach in WotNot, making it interactive and user-friendly.

DEPLOYMENT

The chatbot was deployed using GitHub Pages. An HTML file was created and the chatbot script provided by WotNot was embedded into it. The file was uploaded to a GitHub repository and hosted online. The web channel in WotNot was enabled to allow the chatbot to appear on the website. The chatbot is now accessible through a public URL.

BASIC STRUCTURE OF BOT

Step 1

GitHub Website

Step 2

Loads HTML

Step 3

Script loads chatbot

Step 4

Bot appears on website

Step 5

Interaction with Chatbot
